1 Field a team of three

LAB-Bench biology, multiple choice: 90 DNA-sequence and 54 protocol questions

↓

Claude team. Haiku 5.5 low; Sonnet 5.5 low and medium

GPT team. GPT-6 Luna low; GPT-6.1 Sol low and medium

↓

Round 1. Each member answers alone; the answers are frozen. **Final answer:** a plurality vote of the members' final answers.

2 Round 2: use the teammates?

Vote the first answers; no round 2.

Think again alone.

Ask the best teammate (picked on practice questions).

Read both teammates, then revise.

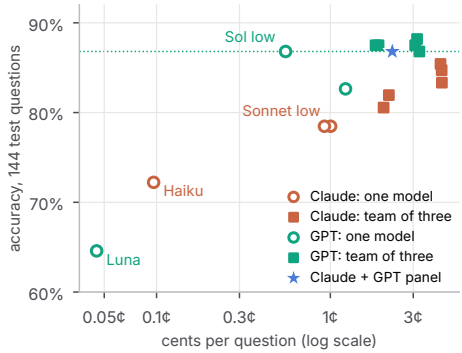

Learned rule: stop, think again or ask one teammate, per member; fitted on practice questions and frozen.

Claude + GPT panel: vote of Sonnet low, Luna low and Sol medium; replayed for $0.

Preregistered. The rule: cheaper than everyone thinking again and at most 3 points less accurate. The panel: above both providers' own votes.

3 Score 144 test questions once

One Sol low call scored 86.8% at 0.55¢ a question (dotted line); the best Claude team 85.4% at 4.3¢. The panel scored 86.8%, −0.7 points against GPT's own vote.
